

Omnetics Miniature Connector News

Applications and Insights on Products and Applications at Omnetics

“Robotics Are Everywhere from Hands reaching-out for NASA to Soldier-worn systems for weight bearing devices. Omnetics Connectors offer rugged Military Quality performance while remaining small and light weight.

Micro and Nano Connectors come in many shapes and pin counts. Prosthetic and robotic circuits are often fit-into the “form to perform” their assigned function. Custom connector designs can be offered quickly and easily in “Solid Works” format to provide early design-to-fit the application. A line of standard and off-the-shelf connectors are readily available to help during the prototype stages of building new equipment. See the design and products sections at www.omnetics.com

Need a really small connector robotic connection?
See our PZNs @ .025” Pitch
With very small molded Insulators that guide mating.
